GENERAL / SYSTEM SET-UP

INTRODUCTION

SCOPE OF THIS MANUAL

This manual is intended for use by experienced technicians familiar with similar types of commercial grade communications equipment. It contains all required service information for the equipment and is current as of the publication data. Changes which may occur after publication are covered by either Service Bulletins or Manual Revisions. These are issued as required.

ORDERING REPLACEMENT PARTS

When ordering replacement parts or equipment information, the full part identification number should be included. This applies to all parts: components, kits, or chassis. If the part number is not known, include the chassis or kit number of which it is a part, and a sufficient description of the required component for proper identification.

PERSONNEL SAFETY

The following precautions are recommended for personnel safety:

• DO NOT transmit until all RF connectors are verified secure and any open connectors are properly terminated.

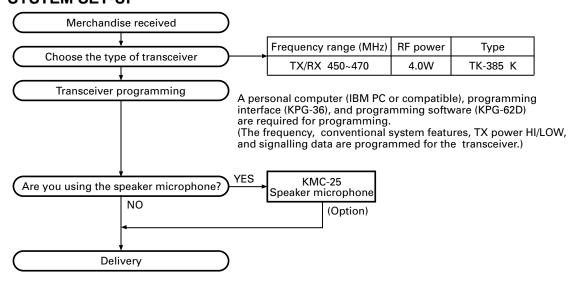

- SHUT OFF and DO NOT operate this equipment near electrical blasting caps or in an explosive atmosphere.
- This equipment should be serviced by a qualified technician only.

SERVICE

This radio is designed for easy servicing. Refer to the schematic diagrams, printed circuit board views, and alignment procedures contained within.

SYSTEM SET-UP

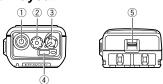

OPERATING FEATURES

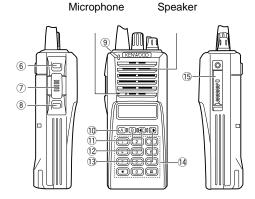

1. Operation Features

The TK-385 is a UHF FM Radio designed in both Trunking Mode and Conventional Mode.

2. Transceiver Controls and Indicators

2-1. Physical Layout

2-2. Panel controls

The key on the top and front panel is momentary-type push buttons. The functions of these keys and knob are explained below.

1 Antenna connector

Connect the antenna here.

2 Rotary encoder

③ POWER switch/ VOLUME control

Turn clockwise to switch ON the transceiver. Rotate to adjust the volume. Turn conterclockwise fully to switch OFF the transceiver.

4 Auxiliary (orange) key

5 Battery pack release latch

Pull back on this latch to release the battery pack.

6 Call key

7 PTT (Push-To-Talk) switch

® Clear key

9 Transmit/ Receive indicator

10 A key

①Bkey

(12) **⋖**C key

① D ► key

14 DTMF keypad

(15) Universal connector

Connect the (optional KMC-25) speaker/ microphone here. Otherwise, keep the supplied cover in place.

2-3. Key functions

Trunking mode

2 Rotary encoder

Rotate this encoder to select your desired call address (voice calls) ot status (status calls).

4 Auxiliary (orange) key (default setting: None)

Press to activate its auxiliary function.

6 Call key

Press to call the displayed call address.

7 PTT (Push-To-Talk) switch

Press to transmit. Also press to initiate a call if "PTT to Initiate Call" has been programmed.

® Clear key

Press to end the current call.

9 Transmit indicator

Lights red while transmitting.

10 A key (default setting: Status/ Stack)

Press to activate its auxiliary function.

1 B key (default setting: Redial)

Press to activate its auxiliary function.

12 **< C** key (default setting: **None**)

Press to activate its auxiliary function. Also press to scroll left while viewing stack entries.

① D ► key (default setting: None)

Press to activate its auxiliary function. Also press to scroll right while viewing stack entries.

(4) DTMF keypad

Press to input a call address or dialing function.

Conventional mode

2 Rotary encoder

Rotate this encoder to select your desired channel.

6 Call key

Press to turn the monitor function ON in order to monitor your selected channel.

7 PTT (Push-To-Talk) switch

Press this switch, then speak into the microphone to call a station.

® Clear key

Press to return to Trunking mode.

9 Transmit/ Receive indicator

Lights green while receiving a signal. Lights red while transmitting.

10 A key

Press to turn Scan ON (or OFF).

11 B key

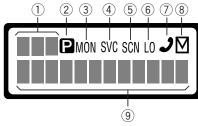

Press to add/delete channel(s) to/from Scan list.

① D ► key

Press to turn the display and keypad backlight ON. The backlight remains ON for 5 seconds.

OPERATING FEATURES / REALIGNMENT

2-4. Display

1 Sub display

displays the strength of received signals.

2 Programming indicator

P appears while in AUX A or Scrambler is being activated.

3 MON (Monitor) indicator

MON appears while you are monitoring a channel by pressing the **Call** key. (Conventional Mode only)

4 SVC (Service) indicator

SVC appears when a control channel is found. It flashes while the transceiver is searching for a control channel.

5 SCN (Scan) indicator

SCN appears while you are scanning. (Conventional Mode only)

6 LO indicator

This icon blinks while in battery warning, if "Always" or "Always W/beep" is selected in the battery warning settings.

7 Handset indicator

J flashes when you activate call diversion.

8 MAIL indicator

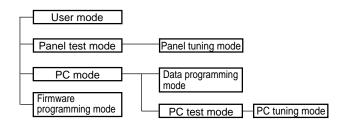

Appears while there is data in the stack. It flashes when there is new data in the stack.

9 Alphanumeric display

duration timer, data messages, and the current operating status of the transceiver.

REALIGNMENT

1. Modes

Mode	Function
User mode	For normal use.
Panel test mode	Used by the dealer to check the fundamental characteristics.
Panel tuning mode	Used by the dealer to tune the radio.
PC mode	Used for communication between the radio and PC (IBM compatible).
Data program- ming mode	Used to read and write frequency data and other features to and from the radio.
PC test mode	Used to check the radio using the PC. This feature is included in the FPU. See panel tuning.
Firmware program- ming mode	Used when changing the main program of the flash memory.

2. How to Enter Each Mode

Mode	Operation
User mode	Power ON
Panel test mode	[B]+Power ON
PC mode	Received commands from PC
Panel tuning mode	[Panel test mode]+[A]
Firmware programming mode	[A]+Power ON

3. Panel Test Mode

Setting method refer to ADJUSTMENT.

4. Panel Tuning Mode

Setting method refer to ADJUSTMENT.

5. PC Mode

5-1. Preface

The TK-385 transceiver is programmed by using a personal computer, programming interface (KPG-36) and programming software (KPG-62D).

The programming software can be used with an IBM PC or compatible. Figure 1 shows the setup of an IBM PC for programming.

5-2. Connection procedure

- 1. Connect the TK-385 to the personal computer with the interface cable.
- When the POWER switch on, user mode can be entered immediately. When PC sends command the radio enter PC mode, and "PROGRAM" is displayed on the LCD.

When data transmitting from transceiver, the red LED is blinking.

When data receiving to transceiver, the green LED is blinking.

Notes:

- The data stored in the personal computer must match model type, when it is written into the flash memory.
- Change the TK-385 to PC mode, then attach the interface cable.

REALIGNMENT

5-3. KPG-36 description

(PC programming interface cable: Option)

The KPG-36 is required to interface the TK-385 to the computer. It has a circuit in its D-subconnector (25-pin) case that converts the RS-232C logic level to the TTL level.

The KPG-36 connects the universal connector of the TK-385 to the computers RS-232C serial port.

5-4. Programming software KPG-62D Description

The KPG-62D is the programming software for the transceiver supplied on three 3.5" floppy disks. This software runs under MS-Windows 95/98 on an IBM-PC or compatible machine.

The data can be input to or read from the trnsceiver and edited on the screen. The programmed or edited data can be printed out. It is also possible to tune the transceiver.

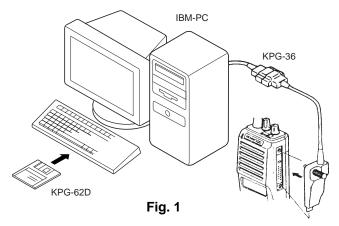

We recommend that install the KPG-62D for example to hard disk first then use it.

5-5. Programming with IBM PC

If data is transferred to the transceiver from an IBM PC with the KPG-62D, the destination data (basic radio information) for each set can be modified. Normally, it is not necessary to modify the destination data because their values are determined automatically when the frequency range (frequency type) is set.

The values should be modified only if necessary. Data can be programmed into the flash memory in RS-232C format via the universal connector.

KPG-62D instruction manual parts No.: B62-1354-XX

6. Firmware Programming Mode

6-1. Preface

Flash memory is mounted on the TK-385. This allows the TK-385 to be upgraded when new features are released in the future. (For details on how to obtain the firmware, contact Customer Service.)

6-2. Connection procedure

Connect the TK-385 to the personal computer (IBM PC or compatible) with the interface cable (KPG-36). (Connection is the same as in the PC Mode.)

6-3. Programming

- 1. Start up the firmware programming software (Fpro.exe).
- 2. Set the communications speed (normally, 57600 bps) and communications port in the configuration item.
- 3. Set the firmware to be updated by File name item.
- Turn the TK-385 power ON with the [A] switch held down. Hold the switch down until the display changes to "PROG 57600". When "PROG 57600" appears, release your finger from the switch.
- Check the connection between the TK-385 and the personal computer, and make sure that the TK-385 Is in the Program mode.
- 6. Press write button in the window. A window opens on the display to indicate progress of writing. When the TK-385 starts to receive data. the [P] icon is blinking.
- 7. If writing ends successfully, the LED on the TK-385 lights and the checksum is displayed.
- 8. If you want to continue programming other TK-385 s, repeat steps 4 to 7.

Notes:

- This mode cannot be entered if the Firmware Programming mode is set to Disable in the Programming software (KPG-62D).
- When programming the firmware, it is recommend to copy the data from the floppy disk to your hard disk before update the radio firmware.
 - Directry copying from the floppy disk to the radio may not work because the access speed is too slow.

6-4. Function

- If you press the [Call] switch (top of left side) while "PROG 57600" is displayed, the version is displayed. If you press the [Call] switch again while the version is displayed, "PROG 57600" is redisplayed.
- 2. If you press the [Clear] switch (bottom of left side) while "PROG 57600" is displayed, the display changes to "PROG 19200" to indicate that the write speed is low speed (19200 bps). If you press the [Clear] switch again while "PROG 19200" is displayed, the display changes to "PROG 38400", and the write speed becomes the middle-speed mode (38400 bps). If you press the [Clear] switch again while "PROG 38400" is displayed, the display returns to "PROG 57600".
- If you press the [Clear] switch while the version is displayed, the checksum is displayed. If you press the [Clear] switch again while the checksum is displayed, the version is redisplayed.

Note:

Normally, write in the high-speed mode.

1. Overview

This transceiver is UHF/FM portable transceiver designed to operate in the frequency range of 450 to 470MHz (K).

2. Circuit Configuration by Frequency

The receiver is a double-conversion superheterodyne with a first intermediate frequency (IF) of 44.85MHz and a second IF of 455kHz. Incoming signals from the antenna are mixed with the local signal from the PLL to produce the first IF of 44.85MHz.

This is then mixed with the 44.395MHz second local oscillator output to produce the 455kHz second IF. This is detected to give the demodulated signal.

The transmit signal frequency is generated by the PLL VCO, and modulated by the signal from the microphone. It is then amplified and sent to the antenna.

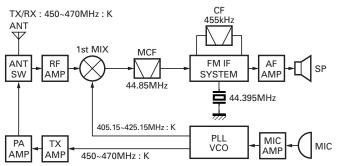

Fig. 1 Frequency configuration

3. Receiver System

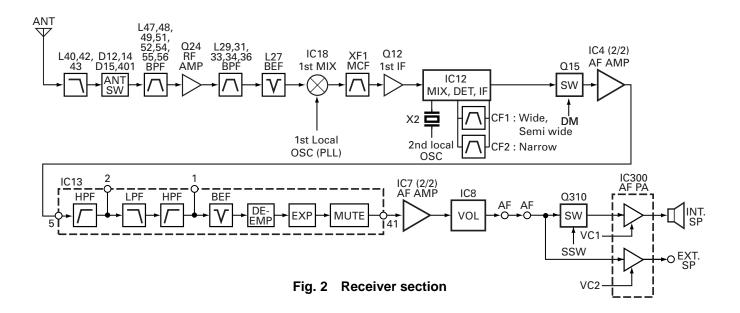

3-1. RF unit

An incoming RF signal from the antenna terminal is passed through the antenna switch (D12, D14. D15 and D401 are off) and then the bandpass filter (L47,48,49,51,52,54,55,56). The bandpass filter is adjusted by a variable capacitor. The input voltage to the variable capacitor is regulated by the voltage output from the D/A converter (IC8). The signal is amplified by RF amplifier Q24, and passed through the bandpass filter (L29,31,33,34,36) and band-eliminate filter (L27) to remove the spurious signal again. The resulting signal is applied to the first mixer (IC18), where it is mixed with the first local oscillator signal output from the frequency synthesizer to produce the first IF (44.85MHz). The 1st mixer uses the GaAs IC.

3-2. IF unit

The first IF signal is passed through a crystal filter (XF1) to remove a adjacent channel signal. The filtered first IF signal is amplified by the first IF amplifier (Q12) and then applied to the IF system IC (IC12). The IF system IC provides a second mixer, second local oscillator, limiting amplifier, quadrature detector and RSSI (Received Signal Strength Indicator). The second mixer mixes the first IF signal with the 44.395MHz of second local oscillator output (crystal unit X2) and produces the second IF signal of 455kHz.

The second IF signal is passed through the ceramic filter (CF2) to more remove the adjacent channel signal. The filtered second IF signal is amplified by the limiting amplifier and demodulated by the quadrature detector with ceramic discriminator (CD1). The demodulated signal is routed to the audio circuit.

3-3. Audio amplifier circuit

The demodulated signal from IC12 goes through the mute switch (Q15) and is amplified by IC4 (2/2), high-pass filtered, low-pass filtered, high-pass filtered, band-eliminate filtered, and de-emphasized by IC13.

The signal then goes through an AF amplifier IC7 (2/2), an electronic volume control (IC8), and an AF switch (Q310 is on), and is routed to audio power amplifier (IC300), where it is amplified and output to the internal speaker.

The audio mute signal (AM) from the shift register becomes Low in the standby and Q304, Q305 which are power supply circuit for IC300 turn off. Also, IC13 is set to the power down mode according to data from microprocessor, and the AF signal is muted. When the audio is output, AM becomes High to turn Q304, Q305 ON, and voltage is supplied to power terminal VP of IC300. Also, IC13 is canceled out of the power down mode.

The speaker is switched by the logic of speaker switching terminal SSW on the universal connector. When SP-MIC is not attached, the logic of SSW becomes High and SW (Q310) is turned ON, and the AF signal is input to both amplifiers of IC300.

When SP-MIC is attached, SSW is connected to GND at inside of SP-MIC. For this reason, Q310 is turned OFF, and the AF signal is input only to amplifier for EXT SP of IC300.

AM	SSW	VC1	VC2	SP
Н	Н	Н	L	INT
Н	L	L	Н	EXT
L	Н	L	L	MUTE
L	L	L	L	MUTE

Change of INT/EXT SP refer to Fig. 3.

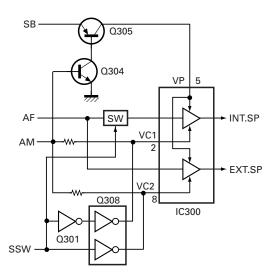

Fig. 3 Audio amplifier circuit

3-5. Squelch circuit

The output from IC12 enters FM IC again, then passed through a band-pass filter. The noise component output from IC12 is amplified by Q4 and rectified by D4 to produce a DC voltage corresponding to the noise level. The DC voltage is sent to the analog port of the CPU (IC19). And IC12 outputs a DC voltage (RSSI) corresponding to the input of the IF amplifier. The CPU reads the RSSI signal via pin 93.

IC19 determines whether to output sounds from the speaker by comparing the input voltage of pin 91 and pin 93 with the preset value.

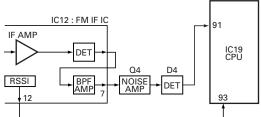

Fig. 4 Squelch circuit

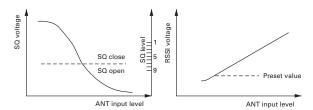

Fig. 5 Squelch and RSSI voltage vs ANT input level

4. Transmitter System

4-1. Microphone amplifier

The signal from the internal microphone goes through the mute switch (Q300).

When the SP-MIC is not attached, the microphone switching terminal (MSW) on the universal connector becomes High, and mute switch (Q300) is turned ON. When the SP-MIC is attached, MSW is connected to GND at inside of SP-MIC. For this reason, Q300 is turned OFF, the internal microphone is muted, and only the input of the external microphone is supplied to the microphone amplifier of the TX-RX unit.

The signal from microphone passes through the limitter circuit in D8, Mic mute switch (Q17 is off in TX) and through the low-pass filter (IC25: 1/2), the high-pass filter, the ALC circuit, the low-pass filter, the high-pass filter, and preemphasis/IDC circuit in IC13. When encoding DTMF, mute switch (Q13) is turned OFF for muting the microphone input signal.

The signal passes through the D/A converter (IC8) for the maximum deviation adjustment, and enters the summing amplifier consisting of IC7 (1/2), and is mixed with the low speed data from the CPU (IC19) and 9600bps DATA from Optional Board Terminal.

The output signal from the summing amplifier passes through the D/A converter (IC8) again and goes to the VCO modulation input.

The other output signal from the summing amplifier passes through the D/A converter (IC8) again for the BAL adjustment, and the buffer amplifier (IC1 (2/2)), and goes to the VCXO modulation input.

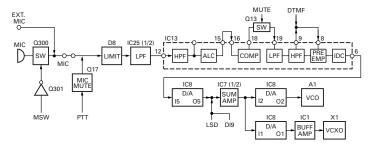

Fig. 6 Microphone amplifier

4-2. Drive and Final amplifier

The signal from the T/R switch (D9 is on) is amplified by the pre-drive (Q18) and drive amplifier (Q20) to 50mW.

The output of the drive amplifier is amplified by the RF power amplifier (IC100) to 4.0W (1W when the power is low). The RF power amplifier consists of two stages MOS FET transistor. The output of the RF power amplifier is then passed through the harmonic filter (LPF) and antenna switch (D12, D401 is on) and applied to the antenna terminal.

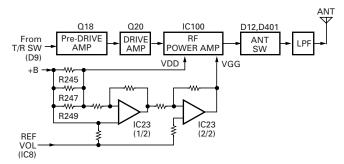

Fig. 7 Drive and final amplifier and APC circuit

4-3. APC circuit

The APC circuit always monitors the current flowing through the RF power amplifier (IC100) and keeps a constant current. The voltage drop at R245, R247 and R249 is caused by the current flowing through the RF power amplifier and this voltage is applied to the differential amplifier (IC23 1/2).

IC23(2/2) compares the output voltage of IC23(1/2) with the reference voltage from IC8, and the output of IC23(2/2) controls the VGG of the RF power amplifier to make the both voltages to same voltage.

The change of power high/low is carried out by the change of the reference voltage. Q22,23 and 25 are turned on in transmit and the APC circuit is active.

5. Frequency Synthesizer Unit

5-1. Frequency synthesizer

The frequency synthesizer consists of the VCXO (X1), VCO (A1), PLL IC(IC14) and buffer amplifiers.

The VCXO generates 16.8MHz. The frequency stability is 1.5ppm within the temperature range of -30 to +60°C. The frequency tuning and modulation of the VCXO are done to apply a voltage to pin 1 of the VCXO. The output of the VCXO is applied to pin 8 of the PLL IC.

The TK-385's VCO consists of 2VCO and covers a dual range of the $405.15\sim425.15$ MHz and the $450\sim470$ MHz. The VCO generates $405.15\sim425.15$ MHz for providing to the first local signal in receive. In TX, the pin 3 of the VCO goes low and the VCO generates $450\sim470$ MHz.

The output of the VCO is amplified by the buffer amplifier (Q16) and routed to the pin 5 of the PLL IC. Also the output of the VCO is amplified by the buffer amplifier (Q18) and routed to the next stage according to T/R switch (D9, D23).

The PLL IC consists of a prescaler, fractional divider, reference divider, phase comparator, charge pump. This PLL IC is fractional-N type synthesizer and performs in the 40.50 or 60kHz reference signal which is eighth of the channel step (6.25kHz). The input signal from the pins 5 and 8 of the PLL IC is divided down to the 50kHz and compared at phase comparator. The pulsed output signal of the phase comparator is applied to the charge pump and transformed into DC signal in the loop filter (LPF). The DC signal is applied to the pin 1 of the VCO and locked to keep the VCO frequency constant.

PLL data is output from DT (pin 75). CP (pin 19) and EP (pin 47) of the microprocessor (IC19). The data are input to the PLL IC when the channel is changed or when transmission is changed to reception and vice versa.

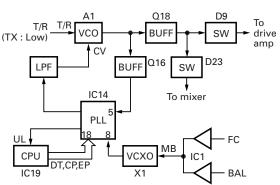

Fig. 8 PLL block diagram

6. Control Circuit

The control circuit consists of microprocessor (IC19) and its peripheral circuits. It controls the TX-RX unit and transfers data to and from the display unit. IC19 mainly performs the following;

- 1) Switching between transmission and reception by PTT signal input.
- 2) Reading system, group, frequency, and program data from the memory circuit.
- 3) Sending frequency program data to the PLL.
- 4) Controlling squelch on/off by the DC voltage from the squelch circuit.
- 5) Controlling the audio mute circuit by decode data input.
- 6) Transmitting tone and encode data.

6-1. Memory circuit

Memory circuit consists of the CPU (IC19) and a flash memory (IC17).

A flash memory has a capacity of 2M bits and contains the transceiver control program for the CPU and the data for operating features.

This program can be easily downloaded from an external device.

• Flash Memory

Note : The flash memory stores the data containing the FPU (KPG-62D) program, Security Number (MPT Serial Number) and firmware program (User mode, Test mode, Tuning mode, etc.).

This data must be reinstalled when replacing the flash memory.

EEPROM

Note : The EEPROM stores tuning data (Deviation, Squelch, etc.).

Realign the transceiver after replacing the EEPROM.

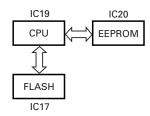

Fig. 9 Memory circuit

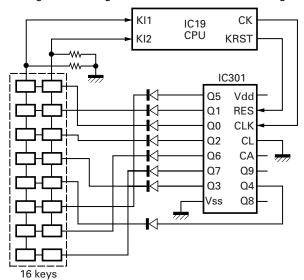

6-2. Low battery warning

The battery voltage is monitored by the microprocessor (IC19). When the battery voltage falls below the voltage set by the Low Battery Warning adjustment, the red LED flashes to notify the operator that it is time to replace the battery. If the battery voltage falls even more (approx. 5.8V), a beep sounds and transmission is stopped.

Low battery warning	Battery condition
The red LED flashes during	The battery voltage is low but
transmission	the transceiver is still usable.
The red LED flashes and	The battery voltage is low and
continuous beep sounds	the transceiver is not usable
while PTT pressed	to make calls.

6-3. Key input

If the clock is supplied to CLK terminal when the RES terminal (CPU pin 78) of the decade counter (IC301) is set to Low, Q0 to Q7 become High sequentially. Normally, KI1 and KI2 are Low (pulled down). When any key is pressed, KI1 or KI2 become High. The CPU detects which key is pressed, according to the voltage of KI1 and KI2 and clock timing.

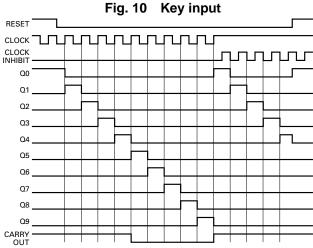

Fig. 11 Decade counter timing chart

7. Signalling Circuit

7-1. Encode

Low-speed data (QT,DQT)

Low-speed data is output from pin 1 of the CPU. The signal passes through a low-pass CR filter, and goes to the summing amplifier (IC7 1/2). The signal is mixed with the audio signal and goes to the VCO (A1) and VCXO (X1) modulation input after passing through the D/A converter (IC8) for BAL adjustment.

• High-speed data (DTMF)

High-speed data is output from pin 2 of the CPU. The signal passes through a low-pass filter consisting of IC10, and provides a TX HSD tone and a RX HSD tone TX HSD deviation making an adjustment by microprocessor is passed through the D/A convertor (IC8), and then applied to the audio processor (IC13).

The signal is mixed with the audio signal and goes to the VCO and VCXO, the RX HSD tone is passed a summing amplifier (IC7 2/2), the D/A converter (IC8) for audio control, audio power amplifier and then to the speaker.

FFSK

ESN utilizes 1200bps FFSK signal. FFSK signal is output from pin 6 of IC13. The signal passes through the D/A converter (IC8) for the FFSK deviation adjustment. and is routed to the VCO. When encoding FFSK, the microphone input signal is muted.

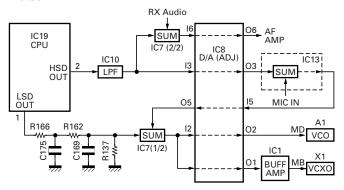

Fig. 12 Encode

7-2. Decode

Low-speed data (QT,DQT)

The demodulated signal from the IF IC (IC12) is amplified by IC4 (2/2) and passes through a low-pass filter (IC11) to remove audio components. The signal is input to pin 95 of the CPU.

The CPU digitizes this signal, performs processing such as DC restoration, and decodes the signal.

• FFSK

The FFSK input signal from the IF IC is amplified by IC4 (1/2) and goes to pin 5 of IC13. The signal is demodulated by FFSK demodulator in IC13. The demodulated data goes to the CPU for processing.

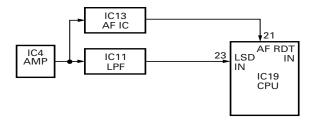

Fig. 13 Decode

8. Power Supply Circuit

Battery +B is supplied via a 3A fuse from the battery terminal connected to the TX-RX unit. After passing through the power switch, power supply (SB) is applied to the three AVRs. IC5 supplies 5V (5M) to the control circuit, and IC9 supplies 5V (5C) to common circuits. IC6 supplies to the TX circuit, the RX circuit and common circuits of needless save mode. During transmission, 5TC becomes Low and Q3 is turned ON to supply 5V (5T) to the TX circuit. During reception, 5RC becomes Low and Q2 is turned ON to supply 5V (5R) to the RX Circuit.

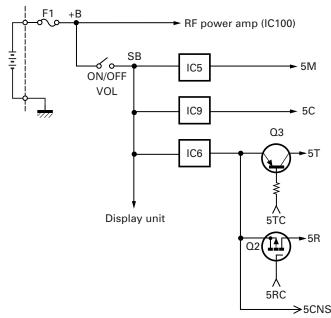

Fig. 14 Power supply circuit

CIRCUIT DESCRIPTION / SEMICONDUCTOR DATA

9. Optional Board Terminal

Terminals for mounting the option board are provided at the bottom edge of the TX-RX unit. The table below shows the correspondence between the board and terminals. R37, R69, R250, R259, R260, R276, R280 may have to be removed depending on the type of option board being used.

Name	Function
SB	Battery (7.5V)
GND	Ground
TXD	Serial data
RXD	Serial data
SQ	Busy: high
LOK	Link acquired : low (TX mode)
DI/ANI	Modulation (ANI) input
DEO	Detect output
TXAI/MUTE	Modulation output from board or mic mute: low
TXAO	Modulation input to board
RXAI	Received signal input to board
RXAO	Received signal output from board
D1	Binary 1
D2	Binary 2
OPT	Scramble, Emergency:low
PTTIN	PTT switch signal input to board (TX:low)
5CNS	Battery (5V)
DI9	9600 bps data input
RXEMAO	Received signal output from board (after de- emphasis)
RXEMAI	Received signal input to board (after de- emphasis)
PTTOUT	PTT switch signal output from board (TX:low)
MONI	Busy:low
LAMP	Busy:low
AAC	Audio Amp Control signal output from board
	(Busy:high)
Audio Beep	Beep signal output from board.
AUX TXD	Serial data
AUX RXD	Serial data/Option switch port
/EXT SW

SEMICONDUCTOR DATA

Pin No.	Port Name	I/O	Function
50~59	A9~A18	-	Flash memory address bus.
60	VCC	-	+5V
61	A8	-	Flash memory address bus.
62	VSS	-	GND.
63~70	A0~A7	-	Flash memory address bus.
71	MONI	ı	Monitor switch input.
72	EN4	ı	Encoder pulse input 4.
73	EN3	I	Encoder pulse input 3.
74	EN1	ı	Encoder pulse input 1.
75	MINDAT	0	Common data output.
76	KEY2	I	Key scan input 2.
77	KEY1	ı	Key scan input 1.
78	RESET	0	Key scan IC reset output
79~86	D0~D7	-	Flash memory data bus.
87	DTMDAT	I	DTMF decode IC data input.
88	PF	I	PF switch input.
89	VOL	ı	Volume level input.
90	BATT	ı	Battery voltage input.
91	ANLSQL	I	Squelch level input.
92	TEMP	I	Thermistor input.
93	RSSI	I	Received signal strength indicator input
			(RSSI).
94	AVSS	-	GND.
95	LSDIN	I	Low speed data input.
96	VREF	-	+5V
97	AVCC	-	+5V
98	SFTSTB1	0	Shift register data strobe output.
99	W/N	0	Wide/Narrow switching output.
100	AFSTB	0	AF IC data strobe output.

PLL System : SA7025DK (TX-RX Unit : IC14)

■ Block diagram

■ Pin description

Pin No.	Symbol	Description
1	CLOCK	Serial clock input.
2	DATA	Serial data input.
3	STROBE	Serial strobe input.
4	Vss	Digital ground.
5	RFIN	Prescaler positive input.
6	RFIN	Prescaler negative input.
7	Vccp	Prescaler positive Supply voltage. This pin supplies
		power to the prescaler and RF input buffer.
8	REFIN	Reference divider input.
9	RA	Auxiliary current setting; resistor to Vssa.
10	AUXIN	AuxIliary divider input.
11	PHA	Auxiliary phase detector output.
12	Vssa	analog ground.
13	PHI	Integral phase detector output.
14	PHP	Proportional phase detector output.
15	Vdda	Analog supply voltage. This pin supplies power
		to the charge pumps, Auxiliary prescaler.
		Auxiliary and Reference buffers.
16	RN	Main current setting; resistor to Vssa.
17	RF	Fractional compensation current setting;
		resistor to Vssa.
18	LOCK	Lock detector output.
19	TEST	Test pin; connect to VDD.
20	Vdd	Digital supply voltage. This pin supplies power
		to the CMOS digital part of the device.

DESCRIPTION OF COMPONENTS

DISPLAY UNIT (X54-3210-12)

5101 Ext. 61111 (X64 6216 12)				
Ref. No.	Use/Function	Operation/Condition		
IC300	IC	Audio power amplifier		
IC301	IC	Counter	/Key scan	
Q300	FET	DC switch	/ INT MIC on/off	
Q301	FET	DC switch		
Q302	Transistor	DC switch	/ LED (Red) driver	
Q303	Transistor	DC switch	/ LED (Green) driver	
Q304	Transistor	DC switch		
Q305	Transistor	Current driver	/ Audio amp AVR	
Q306	Transistor	DC switch		
Q307	Transistor	Current driver	/ LCD back light LED AVR	
Q308	FET	DC switch	/ SP INT/EXT	
Q309	Transistor	Temperature co	mpensation	
Q310	FET	Mute switch		
D300	Zener diode	Surge absorptio	n	
D301	LED	LED	/ Red, Green	
D302	Diode	Quick discharge	/AF mute	
D303	Zener diode	Voltage reference	ce	
D304	Diode	Voltage reference		
D305~310	LED	LCD back light		
D315~318	Diode	Reverse current prevention		
D319~321	Zener diode	Surge absorption		

TX-RX UNIT (X57-6200-10)

Ref. No.	Use/Function	Operation/Condition
IC1,2	IC	Buffer amplifier
IC3	IC	Voltage detector / Reset
IC4	IC	Buffer amplifier
IC5	IC	Voltage regulator / 5M
IC6	IC	Voltage regulator / 5V
IC7	IC	Buffer amplifier
IC8	IC	D/A converter (Adjustment)
IC9	IC	Voltage regulator / 5C
IC10	IC	Active filter / For HSDout
IC11	IC	Active filter / For LSDin
IC12	IC	FM IF system
IC13	IC	Audio processor
IC14	IC	PLL system
IC16	IC	DTMF decoder
IC17	IC	Flash memory
IC18	IC	Active DBM
IC19	IC	Microprocessor
IC20	IC	EEPROM
IC21,22	IC	Shift register / Output expander
IC23	IC	Comparator (APC)
IC24	IC	Analog switch
IC25	IC	Active filter
Q1	Transistor	Switch
Q2	FET	DC switch / 5R
Q3	Transistor	DC switch / 5T
Q4	Transistor	Noise amplifier / Squelch
Q5	FET	DC switch / Save
Q6	Transistor	2 nd IF W/N switch sets to on when Narrow

Ref. No.	Use/Function	Operation/Condition
Q7	Transistor	2 nd IF W/N switch sets to on when Wide
Q8	Transistor	Ripple filter
Q9	Transistor	DC switch / W/N audio amplitude adjust
Q10	Transistor	AF mute switch
Q11	FET	Mute switch
Q12	Transistor	IF amplifier
Q13	FET	Mute switch / MIC line mute
Q14	FET	DC switch
Q15	FET	DET mute
Q16	Transistor	PLL IC fin amplifier
Q17,18	Transistor	Buffer amplifier
Q19	Transistor	Clock frequency shift
Q20	Transistor	RF amplifier / TX driver
Q21	FET	DC switch
Q22	Transistor	DC switch
Q23	FET	DC switch
Q24	FET	RF amplifier
Q25	Transistor	DC switch
Q26	FET	Mute switch / MIC line mute
D1	Diode	Reverse protection
D2	Diode	Overload protection
D3	Diode	Reverse current protection
D4	Diode	Noise detection
D5	Diode	RF switch (2 nd IF wide/narrow)
D6	Diode	Current steering
D7	Diode	RF switch (2 nd IF wide/narrow)
D8	Diode	Voltage clamp
D9	Diode	TX/RX switch
D10	Diode	Overload protection
D11	Diode	Speed up
D12,14,15	Diode	ANT switch
D16	Diode	Overload protection
D17,18	Diode	Surge absorption
D20,22	Diode	Varactor tuning
D23	Diode	Voltage drop
D24,25	Diode	ANT switch
D401	Diode	ANT switch
D402	Diode	Discharge

SUB UNIT (X58-4592-71)

Ref. No.	Use/Function	Operation/Condition
Q50	FET	VCO oscillation
Q51	FET	DC switch
Q52	FET	VCO oscillation
Q53	Transistor	DC switch
Q54	Transistor	RF Buffer amplifier
D50-D57	Diode	Frequency control
D58	Diode	TX modulation

PACKING

Test Equipment Required for Alignment

	Test Equipment		Major Specifications
1.	Standard Signal Generator	Frequency Range	400 to 470MHz
	(SSG)	Modulation	Frequency modulation and external modulation.
		Output	-127dBm/0.1μV to greater than -47dBm/1mV
2.	Power Meter	Input Impedance	50Ω.
		Operation Frequency	400 to 470MHz or more.
		Measurement Range	Vicinity of 10W
3.	Deviation Meter	Frequency Range	400 to 470MHz.
4.	Digital Volt Meter	Measuring Range	10mV to 10V DC
	(DVM)	Input Impedance	High input impedance for minimum circuit loading.
5.	Oscilloscope		DC through 30MHz.
6.	High Sensitivity	Frequency Range	10Hz to 1000MHz.
	Frequency Counter	Frequency Stability	0.2ppm or less.
7.	Ammeter		5A.
8.	AF Volt Meter	Frequency Range	50Hz to 10kHz.
	(AF VTVM)	Voltage Range	1mV to 10V.
9.	Audio Generator (AG)	Frequency Range	50Hz to 5kHz or more.
		Output	0 to 1V.
10.	Distortion Meter	Capability	3% or less at 1kHz.
		Input Level	50mV to 10Vrms.
11.	Spectrum Analyzer	Measuring Range	DC to 1GHz or more
12.	Tracking Generator	Center frequency	50kHz to 600MHz
		Output Voltage	100mV or more
13.	16Ω Dummy Load		Approx. 16 Ω , 3W.
14.	Regulated Power Supply		5V to 10V, approx. 5A
			Useful if ammeter equipped.

■ The following parts are required for adjustment

1. Antenna connector adapter

The antenna connector of this radio uses an SMA terminal. Use an antenna connector adapter [SMA(f) - BNC(f) or SMA(f) - N(f)] for adjustment. (The adapter is not provided as an option, so buy a commercially-available one.)

Note

When the antenna connector adapter touches the knob, draw out the knob to mount the connector.

2. Universal connector

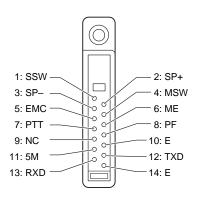

Use the interface cable (KPG-36) for PC tuning or the lead wire with plug (E30-3287-18) and screw (N08-0535-08) for panel tuning. Connect the plug to the universal connector of the radio and tighten the screw.

The lead wire with plug (E30-3287-18) and screw (N08-0535-08) terminals are as follows. Numbers are universal connector terminal numbers.

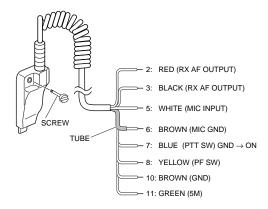

Caution

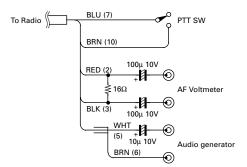

- When connecting the plug to the universal connector of the radio, a short circuit may occur. To provent this, be sure to turn the radio POWER switch off.
- Since the RX AF output is a BTL output, there is a DC component. Isolate this with a capacitor or transformer as shown in the figure.
- 3. Do not connct an instrument between red or black and GND.

Universal connector

· Panel tuning

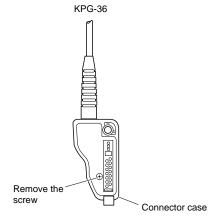

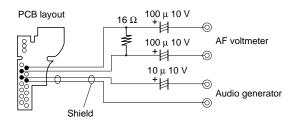

PC tuning

Connect the wires to the PCB in the connector case of interface cable.

For output the wires out of the connector case, need to process the connector case.

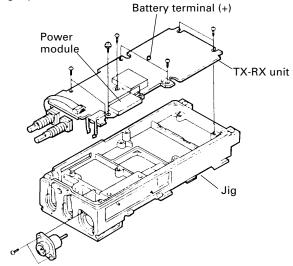

Repair Jig (Chassis)

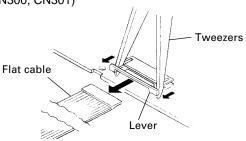

Use jig (part No.: W05-0825-00) for repairing the TK-385. Place the TX-RX unit on the jig and fit it with 7 screws.

The jig facilitates the voltage check and protects the module when the voltage on the flow side of the TX-RX unit is checked during repairs.

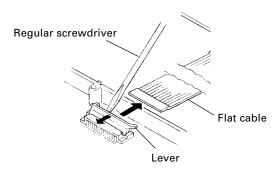

How to Remove the Flat Cable

 Gently draw out both sides of the connector lever uniformly in the direction of the arrow with tweezers. (CN300, CN301)

 Gently rise up the connector lever in the direction of the arrow with a fine regular screwdriver or tweezers. (CN1, CN3, CN304)

Test Mode

■ Test mode operating features

This transceiver has a test mode. To enter test mode, press [B] key and turn power on. Hold [B] key until test channel No. and test signalling No. appears on LCD. Test mode can be inhibited by programming. To exit test mode, switch the power on again. The following functions are available in test mode.

Controls

Controls	"FNC" appears	"FNC" not appears		
[PTT]	Used when making a	Used when making		
	transmission.	a transmission.		
[AUX]	Release FNC	Unused		
[Call]	Release FNC	Monitor ON and OFF.

and [#], [*]				
[ENCODER]	Release FNC	Changes channel.		

LCD indicator

"SCN" Unused

"Lights at Compander ON.
"LO" Lights at RF Power Low.

"P" Unused

"MON" Lights at moniter ON.

"SVC" Unlock

"∑" Lights at FFSK 2400bps.

· LED indicator

Red LED Lights during transmission. Blinks at the low

battery voltage warning.

Green LED Lights when there is a carrier.

Sub LCD indicator

"FNC" appears at Function ON.

■ Frequency and signalling

The set has been adjusted for the frequencies shown in the following table. When required. re-adjust them following the adjustment procedure to obtain the frequencies you want in actual operation.

Frequency (MHz) (K type)

Channel No.	RX frequency	TX frequency
1	455.05000	455.10000
2	440.05000	440.10000
3	469.95000	469.90000
4	460.00000	460.00000
5	460.20000	460.20000
6	460.40000	460.40000
7 ~ 16		

Note

You must adjust the frequencies in all channels as shown above, even though the channel frequencies in the 2 row are below the specifications of the TK-385.

Signalling

Signalling No.	RX	TX
1	None	None
2	None	100Hz Square wave
3	QT 67.0Hz	QT 67.0Hz
4	QT 151.4Hz	QT 151.4Hz
5	QT 210.7Hz	QT 210.7Hz
6	QT 250.3Hz	QT 250.3Hz
7	DQT 023N	DQT 023N
8	DQT 754I	DQT 754I
9	None	DTMF tone 9
10	None	Single Tone 1600Hz
		(HSD OUT)
11	None	Single Tone 1200Hz
		(MODEM OUT)
12	None	Single Tone 1800Hz
		(MODEM OUT)
13	None	FFSK(PN pattern)
14	FFSK(CODE)	FFSK(CODE)

Preparations for tuning the transceiver

Before attempting to tune the transceiver, connect the unit to a suitable power supply.

Whenever the transmitter is turned, the unit must be connected to a suitable dummy load (i.e. power meter).

The speaker output connector must be terminated with a 16Ω dummy load and connected to an AC voltmeter and an audio distortion meter or a SINAD measurement meter at all times during tuning.

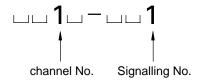

· Transceiver tuning

(To place transceiver in tuning mode)

Channel appears on LCD. Set channel according to tuning requirements.

ADJUSTMENT

LCD display (Test mode)

Press [A], now in tuning mode. Use [◀ C] button to write tuning data through tuning modes, and channel selector knob to adjust tuning requirements (1 to 256 appears on LCD).

Use [D ▶] button to select the adjustment item through tuning modes. Use [B] button to adjust 3 or 5 point tuning.

LCD display (Tuning mode)

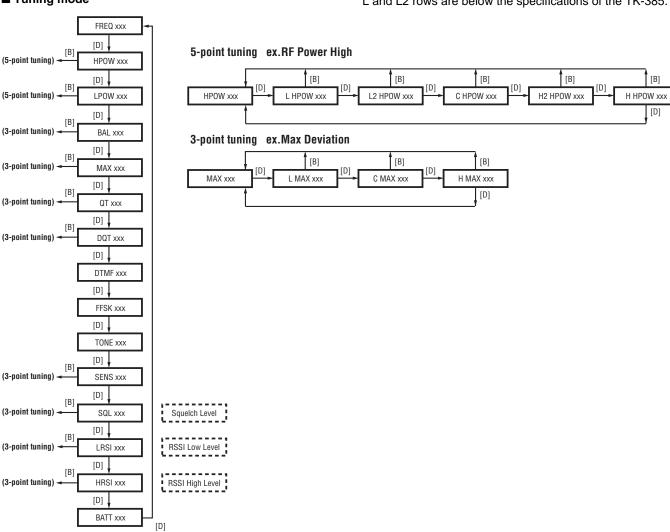

Panel Tuning Mode (K Type)

TEST Ch	RX frequency (MHz)	TX frequency (MHz)
L	440.05000	440.10000
L2	447.55000	447.60000
С	455.05000	455.10000
H2	462.55000	462.60000
Н	469.95000	469.90000

Note

You must adjust the frequencies in all test channels as shown above, even though the test channel frequencies in the L and L2 rows are below the specifications of the TK-385.

	16	NC	-	Not use.
	17	PTT	ı	PTT signal input.
	18	AUX	ı	AUX key input.
	19	LR	0	TX LED control. Normally: 0V, lighting: 5V.
	20	LG	0	RX LED control. Normally: 0V, lighting: 5V.
	21	LBL	0	Backlight LED control.
				Normally: 0V, lighting: 5V.
	22	ME	-	MIC GND.
	23	MIC	ı	MIC signal input.
	24	SB	0	Power output after power switch.
				3210-12 A/2) : DISPLAY section
CN300	1	SB		Power input after power switch.
for	2	MIC	0	MIC signal output.
for	3 4	ME LBL	- 	MIC GND.
X57-		LDL	1	Backlight LED control.
TX-RX		1.0	,	Normally: 0V, lighting: 5V.
unit	5	LG LR	 	RX LED control. Normally: 0V, lighting: 5V.
	6			TX LED control. Normally: 0V, lighting: 5V.
	7	AUX	0	AUX key output.
	8 9	PTT NC	0	PTT signal output.
	10	CS	- 	Not use.
	10	AM		LCD driver chip select input. Audio mute signal input.
	''	/\IVI		Mute: "L", Unmute: "H"
	12	5M	ı	5V.
	12	JIVI	'	Ov.

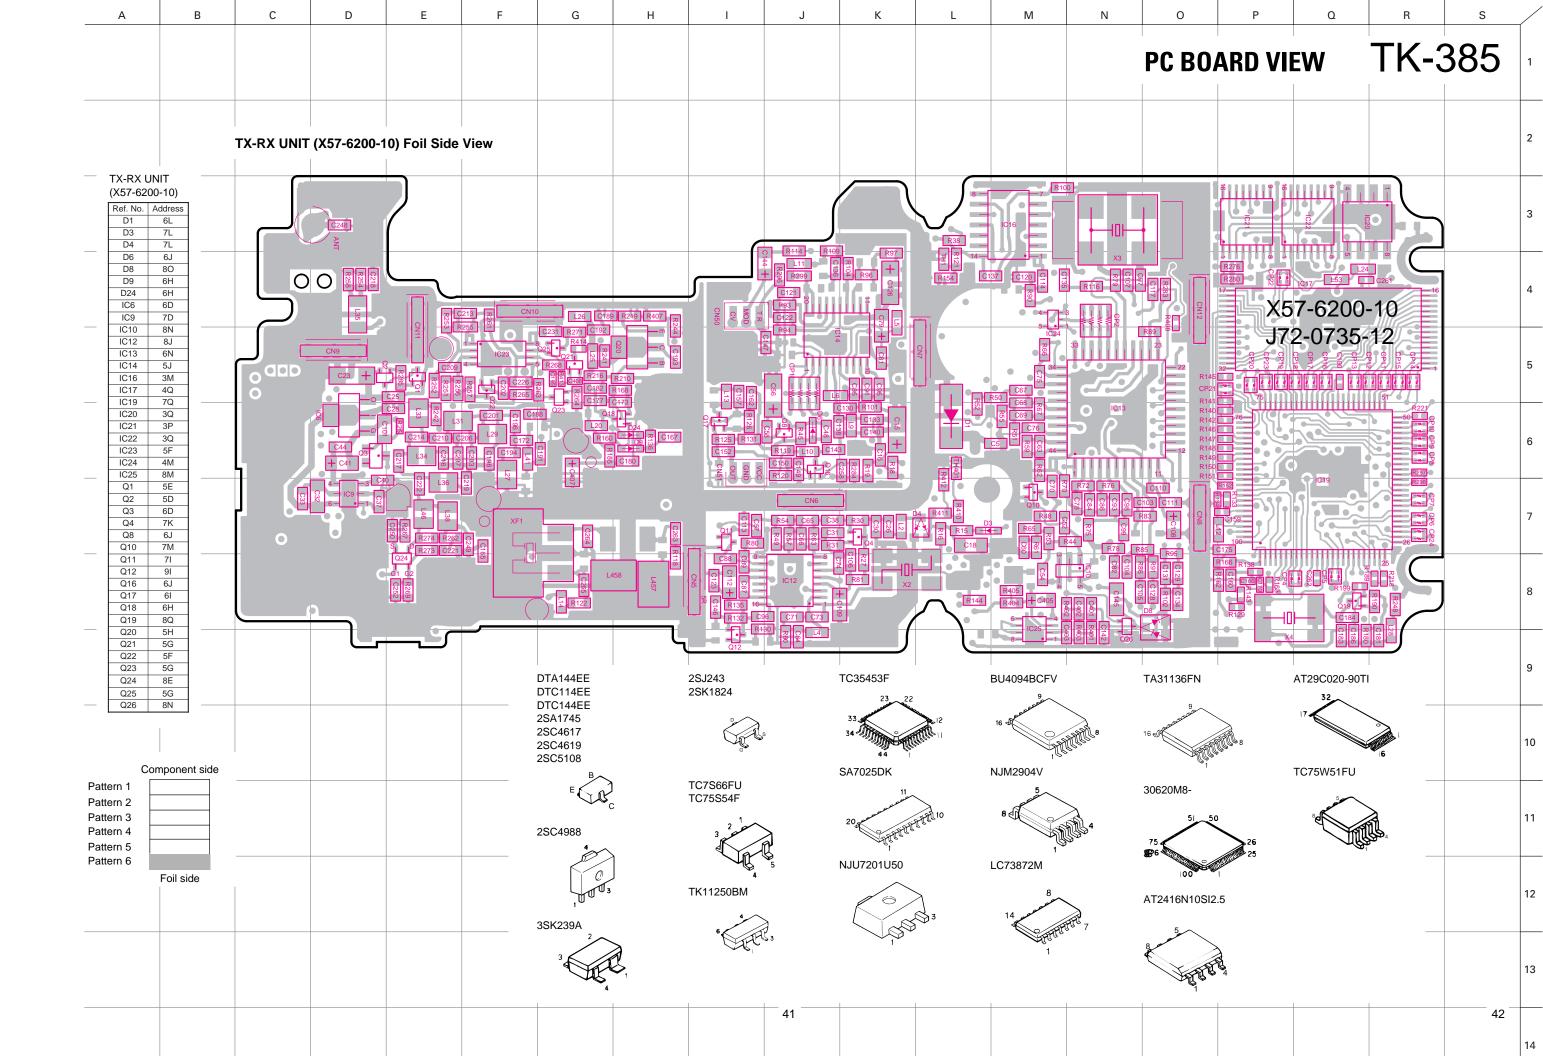

CN No.	Pin No.	Name	I/O	Function
	13	GND	-	GND
	14	KI2	0	KEY output
	15	KI1	0	KEY output
	16	KRS		Key scan IC reset input
	17	DT		Data input for LCD driver/decade counter.
	18	TXD		Serial control signal input.
	19	RXD	0	Serial control signal output.
	20	CK		Clock data input.
	21	PF	0	External PF signal output.
	22	NC	-	Not use.
	23	AFE	-	Audio GND.
	24	AF	1	Audio input.
CN301	1	SSW		EXT/INT speaker switch input.
	2	SP+	0	BTL output + for external speaker.
	3	SP-	0	BTL output - for external speaker.
	4	MSW		EXT/INT MIC switch input.
	5	EMC		External microphone input.
	6	ME	-	External microphone ground.
	7	PTT		External PTT input.
	8	PF		Programmable function key input.
	9	NC	-	Not use.
	10	E	-	GND
	11	5M	0	5V output
	12	TXD	0	Serial data output.
	13	RXD		Serial data input.
CNICO	14	NC (E)	0	Not use (GND)
CN302	1 2	SP E	0	Output for internal speaker. GND
CN304	1	NC	-	Not use.
CN304	2	LEDK	-	Backlight LED control.
	3	LEDA	0	Backlight LED control.
	4	VCI	0	LCD power supply.
	5	SOD	0	Serial data output for LCD driver.
	6	SID	l ĭ l	Serial data input for LCD driver.
	7	SCLK	0	Clock data output for LCD driver.
	8	CS	0	LCD driver chip select output.
	9	Vcc	0	5V
	10	GND	_	GND
		AY UNI	Γ(X5	4-3210-12 B/2) : SW section
CN303	1	MON	Ô	Normally; 5V.,MON when connected GND.
For X57-	2	LAMP	0	Normally; 5V, LAMP when connected GND.
TX-RX	3	PTT	0	Normally; 5V, transmit when connected GND.
unit	4	GND	-	GND

KNB-16A **Circuit Diagram**

KNB-17A

KNB-16A Specifications

Voltage	7.2V (1.2V x 6)
Charging current	1100mAh
Dimensions (mm)	58 W x 110.8 H x 17.2 D
(Projections included)	
Charger and charging time	
KSC-19 (Normal Charger)	Approx. 8 hours
KSC-20 (Rapid Charger)	Approx. 1 hour
Weight	180a

KNB-17A Specifications

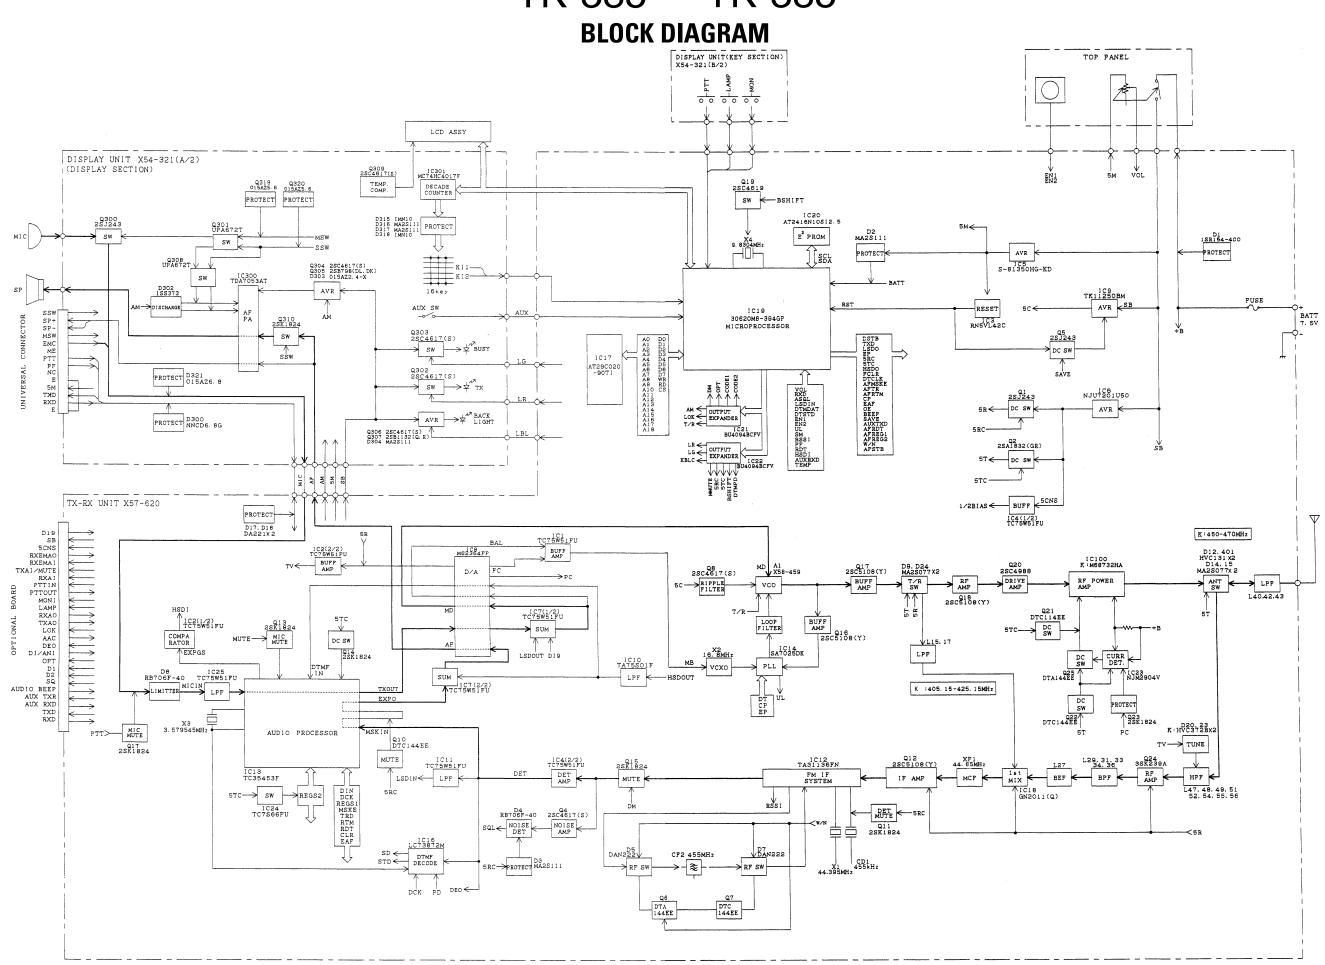

Voltage	.7.2V (1.2V x 6)
Charging current	. 1500mAh
Dimensions (mm)	.58.0 W x 110.8 H x 20.
(Projections included)	
Charger and charging time	
KSC-19 (Normal Charger)	. Approx. 8 hours
KSC-20 (Rapid Charger)	. Approx. 1.3 hour
Weight	. 220g

KSC-19 Charging

KNB-16A	
Voltage	7.2V
Battery capacity	1100mAh
Charging time	Approx. 8 hou
KNB-17A	
Voltage	7.2V
Battery capacity	1500mAh
Charging time	Approx. 8 hou

Specifications

Microphone Impedance	2kΩ	
Sensitivity		
Speaker		
Impedance	16Ω	
Input	0.5W	
Maximum input	1.5W	
Dimensions	62W x 81 H x 29 D (mm)	
Weight (With plug cord)	Approx. 0.17kg	

SPECIFICATIONS

General

Frequency Range

RX, TX...... K: 450 to 470MHz

Battery Voltage...... DC 7.5V ±20%

More than 10 hours at 5-5-90 duty cycle with KNB-17A battery

Dimension and Weight

(Dimensions not including protrusions, weight includes antenna and belt hook)

Receiver (Measurements made per TIA/EIA-603)

RF Input Impedance 50Ω Sensitivity Spurious (Except for IF 1/2)70dB

Transmitter (Measurements made per TIA/EIA-603)

RF Power Output Hi 4W RF Output Impedance50 Ω Spurious-70dB

FM Noise-40dB Audio Distortion Less than 3%

Channel Spread20MHz : K
